## SUMMARY

Software engineer with good knowledge in hardware, experienced in designing and developing multiple web projects. Currently focused on backend technologies, especially distributed and high-performance microservice applications.

## TECHNICAL SKILLS

- **Languages:** Golang, Java, Python, C, C++, Shell/Bash Script
- **Frameworks & Tools:** Gin, Spring/Spring Boot
- **Database:** MySQL, SQLite3, PostgreSQL, MongoDB
- **Others:** Low level hardware/software knowledge, GNU Linux Kernel, Docker
- **English:** TOEIC Certificate 780 (Jun 2018)

## TECHNICAL EXPERIENCE

### Ampere Computing

Dec, 2018 - *present*

Senior Software Engineer

HCMC, VN

*Responsible for building test infrastructure through multiple projects to support testing ARM64-based server systems*

- **Platform Validation Test Tool**
  - ▶ Microservices project to manage server system under test (SUTs), launching agents to connect and perform testing on SUTs
  - ▶ Stack: Java Spring Boot, Golang, VueJS, Websocket, MySQL, Bash/Powershell, Python, Docker, Apache ActiveMQ
  - ▶ Designed framework architecture, implemented and maintained core features
  - ▶ Continuously optimizing framework to help it scale horizontally as number of SUTs increased
  - ▶ Build up CI/CD pipelines to automatically build and test for changes, generate package releases for customers. (Uses Gitlab CI, Earthly, Docker)
  - ▶ Take part in resolve open sources libraries and 3rd parties components licenses in order to ship package to customers
  - ▶ Gain knowledge on server systems hardware and software, debugs issue on Linux
- **Virtual Systems Managing System**
  - ▶ Web applications to generate and manage virtual systems for testing; each virtual system can mimic behavior of real SUTs on through console based on user configuration
  - ▶ Stack: Go with Gin, VueJS with Vuetify, MongoDB
  - ▶ Designed framework and was the main developer of the project
  - ▶ Used this tool to collaborate and help internal teams boost up development/testing progress
- **Test Data Analytics**
  - ▶ Web application to collect and analyze all past test data, virtualizing results on a dashboard for monitoring
  - ▶ Stack: Elastic Search, Apache Airflow, Grafana
  - ▶ Developed tools to collect test data, setup Apache Airflow to schedule and monitor overall workflows

### Arrive Technologies

Jun, 2018 - Dec, 2018

Logic Design Engineer

HCMC, VN

- Joined design and implementation logic circuit targeted in telecommunication application (SONET/SDH) using Verilog
- Implemented firmware for telecommunication chips on FPGA-based embedded processors using C++

## EDUCATION

Electronics & Telecommunications Engineering

Ho Chi Minh University of Technology

BEng

2014 - 2018
